

Sopp Service - Sewing

Take care of your core competence. We take care of the "rest".

As an industrial and contract sewing company, we are the professionals in processing textiles in highest quality. Whether it's protective workwear, baby supplies, medical technology or products of your industry - we approach each project and adapt to and adapt to your requirements.

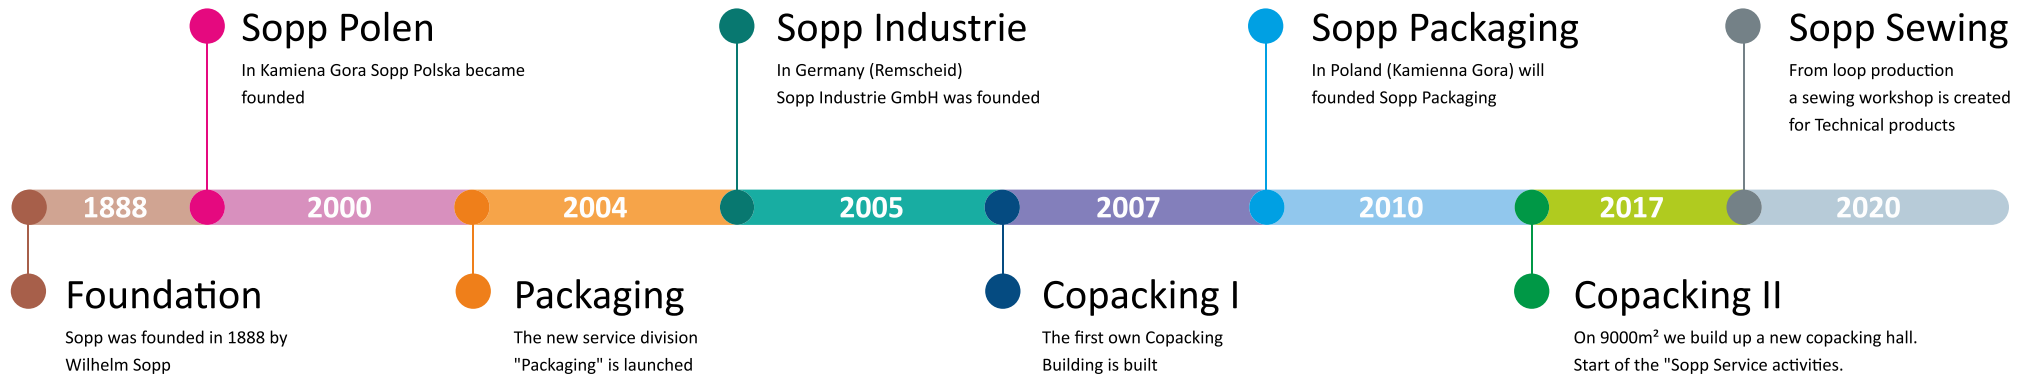

SOPP Industrie

History

Our success story goes back a long way. Since 2005, SOPP has been manufacturing decorative ribbons and gift bows, which also used to give every product a distinctive appearance. So why not take care of the "rest" as well? So we don't just apply a fancy decorative ribbon or gift bow to the customer's product, we fill, re-fill, sort, weigh, label, wrap, sew ... your product, providing a complete, worry-free full service.

To us in individual parts. As a finished product to you!

Numbers

- Sopp Industrie GmbH (tapes and loops) Parent company of Sopp Packaging
- 40 employees in the Remscheid headquarters
- Over 2000 employees worldwide
- Full scale production of tapes and loops
- Worldwide over 15000 m² production and storage area
- Worldwide over 10000 pallet storage places
- Subsidiaries and partner companies in Poland Bulgaria, Pakistan, Sri Lanka and Switzerland.

Locations

In addition to the headquarters in Germany, Sopp owns several international production plants, as well as exclusive partner companies, which have gradually made the Sopp Group more flexible. In 2000, the international expansion of the group started with a plant in Poland, which took over the production of bows and belts. A few years later, the foundation stone for the sewing shop was also laid here, and the location has been expanded to include two more of the company's own plants to date. In addition, new capacities were found in Bulgaria for the production of bows, as well as for the contract sewing. The high demand led to the need for additional productivity, which was made possible in Pakistan as well as Sri Lanka with their own weaving mills and loop production. And as the newest member, a Swiss producer of special loops completed the Sopp family.

Sopp Service - Sewing

In the production of your textile items, we attach great importance to the highest quality and the best workmanship.

Our modern special sewing machines, which are perfectly suited for working with heavy and high-quality fabrics, help us to achieve this.

Thus, we master a number of complex sewing processes with a wide range of material and sewing thread thicknesses on a daily basis.

We will gladly accept your design and manufacture your desired product, even if it involves special requirements or production quantities.

Because from the smallest series to large-scale production, we can cover almost any quantity required.

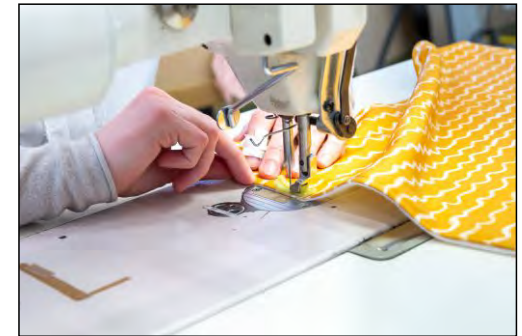

So far, we have gained intensive experience in the fields of fire department protective clothing, baby articles and medical products.

In these and many other areas, our well-coordinated team has extensive experience and is open to any other discipline. We love the challenge of complex work processes. So we are happy to work with start-ups that can benefit from our years of experience in the textile industry, as well as partnering with already established companies.

Thanks to the short distances between the company headquarters in Germany and our European production sites, we are closely networked internally and also with our customers.

If required, we can also take care of the finishing and packaging of your textiles.

We are very pleased to be able to manufacture your textile products as well.

In the entire area, we work in accordance with the ISO standard and have been an amfori BSCI member since 2017.

Sustainability

The world changes through your example,
not by your opinion.

Paulo Coelho

As early as 2016, Sopp Industrie focused on the
extensive development of sustainable materials
and production processes.

The goal: 100% climate neutrality in 2027

The company
